

CLAIMS

- 1 1. A system for monitoring a sensor including a manually operated switch
2 closure comprising:
 - 3 a transmitter of at least electronic serial numbers to a cellular
4 telephone system,
5 said sensor coupled to said transmitter so that said transmitter sends
6 a predetermined said electronic serial number responsive to operation of said
7 sensor,
8 a computer system coupled to said cellular telephone system, said
9 computer system receiving said predetermined electronic serial number and
10 providing notification to a concerned entity with respect to said operation of
11 said sensor.
